FLAME SENSORS:

Our Product

- » Burner / Sequence Controllers
- » UV Sensor and Amplifiers
- » Flame Rod Amplifier
- » Burner Controllers
- » Flame Sensors
- » Flame Amplifier
- » Ignition Transformer

Reach Us -

307, Vikrant Industrial Estate, Govandi Post Office Road, Deonar, Mumbai - 400 088, Maharashtra, India

Tel. : 2551 2534
Telefax : (022) 2557 6002
Email : response@burnercontroller.com

Website :

Flame Sensor uses a Light Dependent Resistor (LDR) for sensing flame. The flame sensor essentially senses the "Light" emitted by flame. It is usually suited only for oil burners in Boilers. It is not suitable for Furnaces, where background refractory brick glows. These sensor senses all types of light, including Sun light and rays emitted by electric bulb tube light.

Models :-

- 1) Flame Sensor (FS - 1) with Front Viewing
- 2) Flame Sensor (FS - 2) with Side Viewing
- 3) Flame Sensor (FS - 3) Equivalent to Satronic Sensors

Burner Controllers	UV Sensor and Amplifiers	Flame Rod Amplifier	Burner / Sequence Controllers	Flame Sensors	Flame Amplifier	Ignition Transformer
